AUTOMATIC PAY MACHINE SHELTERS

PF-001

from PAR-KUT INTERNATIONAL

The use of automated pay machines is growing. No doubt. These machines have brought customer convenience and of course cost efficiency to parking revenue collection. Whether your application has multi-space parking meters, pay and display machines, or pay in lane equipment, Par-Kut has a shelter to protect your investment and minimize repair expenses. These shelters are designed to ensure longevity for new automated payment machines by shielding them from rain and snow. Even better, the customers are protected while they are performing their transactions. That helps create repeat business. Additionally, keeping rain and snow away from paper tickets and currency can reduce field service calls.

site erected
ALUMINUM APM SHELTERS

preassembled, welded
STEEL APM SHELTERS

Par-Kut's site erected APM shelters are constructed of sturdy anodized aluminum with panels available in a choice of 30 colors. Both standard and custom sizes are available to fit your needs. Aluminum APM shelters feature translucent fiberglass roof, polycarbonate or tempered safety glass, aluminum kick panels or full height glazed walls. Elevated wall panels provide ventilation and drainage. Shelters may be ordered with overhangs for protection from the elements and wider facias to accommodate graphics and signage. With instructions and all required hardware included, these shelters are easy to assemble and provide an economical solution to Automated Pay Machine protection.

Heavy, welded galvanized steel construction produces a one-piece APM shelter that stands up to both physical abuse and the harshest environment. Each Par-Kut shelter is built one at a time to specifications that fit each type of APM. Epoxy primers and acrylic top coats in unlimited colors protect shelters from corrosion while maintaining an inviting appearance to the APM setting. Each shelter is fitted with clear or tinted polycarbonate, or safety tempered glass. Shelters may also be customized to accommodate special equipment features. Designs may include extended overhangs to protect patrons, standing seam roof treatments, window mullions and wide facias to support graphics. Vandal resistant lighting optional.

Since 1954 Par-Kut International has been building both standard and custom booths and shelters for the parking industry. Our proven methods of construction produce an attractive and long lasting enclosure while providing safety and comfort. Par-Kut has delivered thousands of parking booths to surface lots and garages, airports and ground transportation facilities, private parking garages and countless U.S. Government and private sector locations. The Par-Kut brand is synonymous with "quality".
